About Us - Non-Destructive Testing (NDT) Products Limited ...

Ultrasonic Testing is a volumetric Non-Destructive Testing (NDT) method. Unlike surface inspection methods, UT makes it possible to find flaws inside the material. High-frequency sound waves are sent into the material with an ultrasonic transducer. The ultrasound that reflects back from the flaw in the material is made visible in a graph.

MAGNAFLUX LIQUID PENETRANT TESTING CONSUMABLES - NDT

Neutron radiography testing is an underused NDT (non destructive testing) technique. The process uses high yield neutron generators to perform a scan of the internal mechanisms of a sealed object. Like all non destructive testing, the technique works without causing any damage to the object that is being scanned.
