Solaris is a proprietary Unix operating system originally developed by Sun Microsystems. After the Sun acquisition by Oracle in 2010, it was renamed Oracle Solaris.. Solaris superseded the company's earlier SunOS in 1993, and became known for its scalability, especially on SPARC systems, and for originating many innovative features such as DTrace, ZFS and Time Slider.

On August 13, 2010, an internal Oracle memo leaked to the Internet cited plans for ending the OpenSolaris operating system project and community. With Oracle planning to develop Solaris only in a closed source fashion, OpenSolaris developers moved to the Illumos and OpenIndiana project, among others. Discontinuation of OpenSSO
