In organic chemistry, we will learn about the reactions chemists use to synthesize crazy carbon based structures, as well as the analytical methods to characterize them. We will also think about how those reactions are occurring on a molecular level with reaction mechanisms. Simply put, organic chemistry is like building with molecular Legos.

CHEMTECH | Analytical Chemistry

Organic chemistry is a subdiscipline of chemistry that studies the structure, properties and reactions of organic compounds, which contain carbon in covalent bonding. Study of structure determines their chemical composition and formula. Study of properties includes physical and chemical properties, and evaluation of chemical reactivity to understand their behavior.

The electronic Partition function is divided into two part one for monoatomic molecule and second for a polyatomic molecule Ex. O, NO, NO₂, Cl₂ etc in the monoatomic molecule the difference between energy level is too much high. therefore electron can't jump from lower energy level to higher energy level. in this, the degenerated energy level is ground state and value of energy E_e will be zero ...
