1. Proof Theory: A New Subject. Hilbert viewed the axiomatic method as the crucial tool for mathematics (and rational discourse in general). In a talk to the Swiss Mathematical Society in 1917, published the following year as *Axiomatisches Denken* (1918), he articulates his broad perspective on that method and presents it “at work” by considering, in detail, examples from various parts of ...

Combinatory logic is a notation to eliminate the need for quantified variables in mathematical logic. It was introduced by Moses Schönfinkel and Haskell Curry, and has more recently been used in computer science as a theoretical model of computation and also as a basis for the design of functional programming languages. It is based on combinators which were introduced by Schönfinkel in 1920 ...

[8] I have given names to the 'spiritual forces' in Macbeth merely to illustrate the idea, and without any pretension to adequacy. Perhaps, in view of some interpretations of Shakespeare's plays, it will be as well to add that I do not dream of suggesting that in any of his dramas Shakespeare imagined two abstract principles or passions ...

Introduction. The National Science Board (2003) sounded an alarm about critical workforce shortages in jobs that require high-level mathematical and science skills. Their fears about a dwindling pool of mathematicians and scientists has fueled concern that the United States will not be able to maintain its leadership in science and technology, which translates directly to an inability to fill ...

It's amazing to me that we're rapidly approaching the 200 th anniversary of the first photograph being made: Niepce's View from the Window of Le Gras, taken in 1827. My last post concluded with the WWF-style camera cage match that was the beginning of photography. Daguerre and Fox Talbot were the main combatants. Sir John Herschel refereed the match rather impartially and helped both ...

Alternatively, if $\alpha = 0.8$, then $S_{N 0^*, \alpha} = 5$ and the dependence of $N 0^*$ on α is much stronger. This illustrates how the dependence on α can vary at different points in the parameter space. Now let us consider the sensitivity coefficient of the stem cell steady state to the parameter $m 0$, denoted by $S_{N 0^*, m 0}$.

Given a set of biological sequences (RNA, proteins, DNA), the purpose of a MSA method is to align the sequences in a way that will either reflect their evolutionary, functional or structural relationship (). This purpose is achieved by inserting gaps of varying length within the sequences, allowing homologous positions to be aligned with each other—just like one would align beads of identical ...
