Oxidation - loss of electrons by a substance Reduction - gain of electrons by a substance Oxidation and reduction always involve transfer of electrons. Therefore, there is never oxidation without reduction and vice versa in a redox reaction. Oxidizing something must cause something else to be reduced and vice versa.

Chapter 20 Worksheet Redox

Oxidation Reduction Reactions Worksheet - Answer Key . . . What is an oxidation-reduction (or redox) reaction? This is a reaction in which electrons are transferred between reactants. What do the following terms mean? Oxidation Oxidation is a loss of electrons . Reduction Reduction is a gain of electrons .

Oxidation And Reduction Pogil Answers, answering a series . . .

The process of oxidation and reduction can be thought of as a transfer of electrons from one atom to another. As a result of this process, the oxidation numbers of both atoms change. All redox reactions can be divided up into two reactions: an oxidation half-reaction and a reduction half-reaction. This allows for better understanding of the electron

Oxidation and Reduction

electrons appear on the right, and in the reduction half reaction they appear on the left. Each half reaction is multiplied by a factor so that the number of electrons produced by the oxidation is equal to the number consumed by the reduction. Oxidation and reduction always involve transfer of electrons. Therefore, there is never oxidation without reduction and vice versa in a redox reaction.
