Paleolimnology (Greek: paleon =old, limne=lake, logos=study) is a scientific subdiscipline closely related to both limnology and paleoecology. Palaeolimnological studies are concerned with reconstructing the paleoenvironments of inland waters (lakes and streams; freshwater, brackish, or saline) - and especially changes associated with such events as climatic change, human impacts (e.g ...

R. Harmsen, in Encyclopedia of Ecology, 2008. Global Warming and Other Anthropogenic Effects. Extensive research in arctic and alpine regions including ice core analysis, paleolimnology, palynology, and geomorphology has provided a detailed picture of the climatic history of these regions. This allows us to conclude that, as well as the major changes at the end of the last ice age, frequent ...
