Helicopters were developed and built during the first half-century of flight, with the Focke-Wulf Fw 61 being the first operational helicopter in 1936. Some helicopters reached limited production, but it was not until 1942 that a helicopter designed by Igor Sikorsky reached full-scale production, with 131 aircraft built.

Igor Sikorsky designed the first successful helicopter in the late 1930s. His inspiration came from drawings of an aircraft with a spinning wing, drawn by Leonardo da Vinci nearly five hundred years before. Igor I. The paper helicopter provides a way to quickly explain basic DoE concepts. It also offers an easy-to-do experiment you can analyze using Minitab. The Goal: Making a Better Paper Helicopter. To perform a DoE with a paper helicopter we need to identify the desired output, which would be our response variable.

The Paper Helicopter Experiment about helicopter design using our knowledge about the aerodynamics of flight, and tried to think of everything about the design of a paper helicopter that we could control. Then, we made a few helicopters, dropped them, and made some modifications—a fun way to start a project. Factorial Designs

How to make a Paper Helicopter - Simple and Easy
Since the paper models have no motor, they only have one source of lift. As the paper models fall they will spin, imitating the rotation of the rotor blades of a helicopter. Because there is no thrust to produce upward movement, the helicopter will not fly upward, but the spin will reduce the rate of fall by producing lift, resisting the force ...
