The numerous gas chimneys and seabed pock mark
features present on the 3D seismic covering the
Kunene prospect are evidence of an active petroleum
system. The results of the Kunene-1 well, to be
completed by April 2008, will be presented and its
implications to the hydrocarbon prospectivity of the
Namibe Basin discussed.

Prospectivity The pre-salt petroleum play has been
proven in the Angolan offshore. In 1992, the Falcao-1
well penetrated the pre-salt, encountering ~600 m of
organic-rich lacustrine shales, and encountering
reservoir-quality carbonates.
