ANSWERS Physical/Chemical Properties/Change - Google Docs

The answer has to do with chemical and physical changes of matter. A Physical Property A physical property is an aspect of matter that can be observed or measured without changing its chemical composition.

Difference Between Physical and Chemical Properties

A physical change is a change in the state or properties of matter without any accompanying change in its chemical composition (the identities of the substances contained in the matter).

We observe a physical change when wax melts, when sugar dissolves in coffee, and when steam condenses into liquid water (Figure 1).

Chemical properties of a candle? - Answers

A chemical change results from a chemical reaction, while a physical change is when matter changes forms but not chemical identity. Examples of chemical changes are burning, cooking, rusting, and rotting. Examples of physical changes are boiling, melting, freezing, and shredding. Often, physical changes can be undone, if energy is input.

Physical and Chemical Properties Worksheet Physical ...
