Steel piston rings offer higher tensile strength, higher yield strength, greater fatigue life, and greater hardness while still offering a lower ring mass. These factors lead to better stress resistance, reduced groove pound-out, longer service life, better conformability, superior oil economy, and improved blow-by control while still lowering friction.

KS Kolbenschmidt piston ring sets are an important component for reconditioning engines. For intermediate reconditioning of engines with liners we recommend to check further usability of the pistons and to replace the piston rings and cylinder liners. This ensures run-in of the piston rings with the sliding surface of the cylinder liner.

As fuel efficiency improves, reduced weight and a decrease in mechanical loss for engines have become important issues to be solved. In order to reduce friction loss around pistons that accounts roughly for 40-50% of friction loss in the entire engine, narrower-width piston rings that are compatible with smaller pistons and the use of low-tension piston rings are becoming widespread.
