applying the tools of population genetics, particularly in the areas of conservation biology, human genetics, and genomics. Without a solid foundation in population genetics, the analytical tools emerging from population genetics will frequently be misapplied and incorrect interpretations can be made.

Hello, I am studying population genetics at the moment, my main reference for the subject is the Population Genetics and Microevolutionary Theory textbook by A. R. Templeton (is it a good reference by the way?). I understand what I've read so far, but I don't really see what is the difference between microevolution and population genetics; to me it seems like these words are just synonyms for ...

Population Genetics And Microevolutionary Theory ...

Microevolution is the change in allele frequencies that occurs over time within a population. This change is due to four different processes: mutation, selection (natural and artificial), gene flow and genetic drift. This change happens over a relatively short (in evolutionary terms) amount of time compared to the changes termed macroevolution which is where greater differences in the ...
