In optics, dispersion is the phenomenon in which the phase velocity of a wave depends on its frequency. Media having this common property may be termed dispersive media. Sometimes the term chromatic dispersion is used for specificity. Although the term is used in the field of optics to describe light and other electromagnetic waves, dispersion in the same sense can apply to any sort of wave ...

Measures of Dispersion in Statistics (Definition & Types)

Importance of Dispersion: We know that the object of measuring dispersion is to ascertain the degree of deviation which exist in the data and hence, the limits within which the data will vary in some measurable variate or attribute or quality. This object of dispersion is of great importance and occupies a unique position in statistical methods.

Introduction to Air Dispersion Modeling

The dynamic and static properties of the interfacial region between polymer and nanoparticles have wide-ranging consequences on performances of nanomaterials. The thickness and density of the static layer are particularly difficult to assess experimentally due to superimposing nanoparticle interactions. Here, we tune the dispersion of silica nanoparticles in nanocomposites by preadsorption of ...
