Chemistry 12

Kinematic equations relate the variables of motion to one another. Each equation contains four variables. The variables include acceleration (a), time (t), displacement (d), final velocity (vf), and initial velocity (vi). If values of three variables are known, then the others can be calculated using the equations. This page demonstrates the process with 20 sample problems and accompanying ...

Kinematic Equations: Sample Problems and Solutions

9. Based on your answers to the above question, complete the following statement: The overall or equivalent resistance of three resistors placed in parallel will be _____. a. greater than the resistance of the biggest R value of the three. b. less than the resistance of the smallest R value of the three.
