Windows Programming with MFC

Microsoft Foundation Classes (MFC) In

essence, MFC is a SDK interface, a library consisting in a set of classes that act as wrappers around portions of the Windows API , so that C++ programmers may program Windows using some concepts of the object-oriented programming (OOP) paradigm and the C++ language (the Win32 API is based on C, as seen in C and Win32 API Section of the book).

MFC - Overview - Tutorialspoint

MFC, as you probably already know, is Microsoft's C++ class library for Windows programming. Programming Windows with MFC isn't a book about C++; rather, it's a book about writing 32-bit Windows applications in C++ using MFC rather than the Windows API as the chief means of accessing the operating system's essential features and services. It was written with two kinds of people in mind:

types, and classes to simplify creating applications for the Microsoft Windows operating systems. In this tutorial, you will learn all about how to start and create Windows-based applications using MFC.

MFC Tutorial - Tutorialspoint

The MFC framework provides a set of reusable classes designed to simplify Windows programming. MFC provides classes for many basic objects, such as strings, files, and collections that are used in everyday programming. It also provides classes for common Windows APIs and data structures, such as windows, controls, and device contexts. The framework also provides a solid foundation for more advanced features, such as ActiveX and document view processing.

the very fundamentals and, in a step by step, gradient manner, develops most all of the basic Windows programming techniques. There are often many different ways to accomplish the same task. So as you move from example to example

Overview of Windows Programming in C++ | Microsoft Docs

MFC was introduced in 1992 with Microsoft's C/C++ 7.0 compiler for use with 16-bit versions of Windows as an extremely thin object-oriented C++ wrapper for the Windows API. C++ was just beginning to replace C for development of commercial application software at the time. In an MFC program, direct Windows API calls are rarely needed. Instead, programs create objects from Microsoft Foundation Class classes and call member functions belonging to those objects.
