This tutorial provides introductory knowledge on Artificial Intelligence. It would come to a great help if you are about to select Artificial Intelligence as a course subject. You can briefly know about the areas of AI in which research is prospering. It also covers the implementation of AI problems using Prolog. Audience

## Artificial Intelligence Programming in Prolog (AIPP)

Prolog can of course also implement statistical approaches. For example, check out ProbLog, cplint and AILog 2 for probabilistic logic programming and reasoning with uncertainties. The approaches have different advantages and drawbacks: A symbolic approach is typically amenable to formal verification. The rules are explicitly available, and you can check whether they are complete, and whether they express what you intend.

Prolog in AI

Prolog(PROgrammation et LOGique) is a logic programming language widely utilised in Artificial Intelligence. It is a high-level programming language which enables the user to build programs by stating what they want the program to do rather than how it should do it. Due to Prolog's grounding in first-order predicate logic it is intended to be more analogous with human deductive reasoning than other programming languages.

PROLOG: Programming for Artificial Intelligence by Ivan Bratko

Prolog is a declarative programming language. For example: While implementing the solution for a given problem, instead of specifying the ways to achieve a certain goal in a specific situation, user needs to specify about the situation (rules and facts) and the goal (query). After these stages, Prolog interpreter derives the solution.
