William S. Tait, in Handbook of Environmental Degradation of Materials (Third Edition), 2018 27.5.1 Low-carbon Steels. Low-carbon steels are suitable for use with anhydrous liquids, such as hydrocarbon solvents, or chemical streams that have a low amount of water (e.g., on the order of 1 ppm or less).Low-carbon steels are typically unsuitable for use with aqueous chemical streams unless a ...

Johannes Fink, in Petroleum Engineer's Guide to Oil Field Chemicals and Fluids (Third Edition), 2021. Phosphonates. Calcium chloride and calcium nitrate brines are used in establishing and maintaining oil and gas wells [130]. For example, calcium chloride brines are used in drilling muds to cool and to lubricate well bits, and to remove ...

Drilling fluid carries the rock excavated by the drill bit up to the surface. Its ability to do so depends on cutting size, shape, and density, and speed of fluid traveling up the well (annular velocity).These considerations are analogous to the ability of a stream to carry sediment: large sand grains in a slow-moving stream settle to the stream bed, while small sand grains in a fast-moving ...

Natural petroleum gases contain varying amounts of different (primarily alkane) hydrocarbon compounds and one or more inorganic compounds, such as hydrogen sulfide, carbon dioxide, nitrogen (N 2), and water.Characterizing, measuring, and correlating the physical properties of natural gases must take into account this variety of constituents.

Conjugation with sulphydryl groups appears to be an important detoxification process for methyl acrylate in the guinea-pig. The thioethers were identified as N-acetyl-S-(2- carboxyethyl)-L-cysteine and the corresponding monomethyl ester, with a ratio between the two metabolites of 20:1. In male rats exposed to methyl acrylate by inhalation, depletion of nonprotein sulphydryl compounds was most ...

Metalworking fluids are in widespread, high volume use for their coolant, lubricant, and corrosion resistant properties during machining operations. These fluids are complex mixtures of oils, detergents, surfactants, biocides, lubricants, anti-corrosive agents, and other potentially toxic ingredients.

Petroleum, also known as crude oil and oil, is a naturally occurring, yellowish-black liquid found in geological formations beneath the Earth's surface. It is commonly refined into various types of fuels.Components of petroleum are separated using a technique called fractional distillation, i.e., separation of a liquid mixture into fractions differing in boiling point by means of distillation ...
