Erowid Methamphetamines Vault : FAQ

The Genesis of "Shake and Bake" Making meth typically involves obtaining several hazardous and flammable chemicals such as acetone, anhydrous ammonia, ether, and lithium. The mixture of these chemicals often causes explosions, and even if a meth lab is shut down, the toxins remain in the environment for a very long time.

Methamphetamine Synthesis and Effects

Then fill the rest of the way with water, cap the bottle and shake for 5 minutes. Then, draw off the top layer with the eyedropper, and throw away the water layer. Repeat this until you have about 10 ml of ether. Put the cap on it, and put it in the refrigerator if you can. (If you can't, don't worry about it.) Use this in the procedure below.

What's the logic behind shake'n'bake meth? - Quora

Step 1- Prepare pseudo. Start with your pills, crush them in a grinder. Put the powder into a clean, washed out Gatorade jug. Make sure you wash jug with distilled water only. One thousand 600 mg pills will yield 1 ounce of chili, at a 50% return. Next, add distilled water to the powder, and shake.
