Anthony Atala, in Principles of Regenerative Medicine, 2008. INTRODUCTION. From the time the fetus develops, the genitourinary system may be exposed to a variety of possible injuries. Individuals may suffer from infection, congenital disorders, trauma, cancer, inflammation, iatrogenic injuries, or other conditions that may lead to genitourinary organ damage or loss and necessitate eventual ...

Aneurysms and Aortic Dissection | IAME

The spinal cord is a long, thin, tubular structure made up of nervous tissue, which extends from the medulla oblongata in the brainstem to the lumbar region of the vertebral column. It encloses the central canal of the spinal cord, which contains cerebrospinal fluid. The brain and spinal cord together make up the central nervous system (CNS). In humans, the spinal cord begins at the occipital ...

Fractures of the femoral shaft are one of the most common injuries treated by orthopedic surgeons. These fractures are often associated with polytrauma and can be life-threatening. They commonly result from high-energy mechanisms such as motor vehicle collisions (MVC) with sequelae of limb shortening and deformities if not treated appropriately. Femoral shaft fractures (FSF) typically occur in ...
