when added to each of the numbers 24, 32 and 42 would make the sums to be in continued proportion?

Profit and Loss Problems and Solutions | GMAT GRE Maths ...

To calculate this you first need to work out the ratio of fuel to miles driven = 27.5:110; The next step is to simplify this ratio by dividing both halves of the ratio by 27.5 to calculate how much fuel is required to drive one mile: $27.5/27.5 = 1$, $110/27.5 = 4$ the ratio is therefore 1:4. One litre of fuel is required to drive four miles.
