daily fodder, so get to it now!

How To Learn Real Application Clusters (RAC) Administration

Oracle Real Application Clusters enables the transparent deployment of Oracle Databases across a pool of clustered servers. This enables customers to easily re-deploy their single server Oracle Database onto a cluster of database servers, and thereby take full advantage of the combined memory capacity and processing power the clustered database servers provide.

Overview of Storage in Oracle Real Application Clusters. Storage for Oracle Real Application Clusters (Oracle RAC) databases must be shared. In other words, datafiles must reside in an Automatic Storage Management (ASM) disk group, on a cluster file system, or on shared raw devices. This must include space for an undo tablespace for each instance if you are using automatic undo management.
