In the history of artificial intelligence, an AI winter is a period of reduced funding and interest in artificial intelligence research. The term was coined by analogy to the idea of a nuclear winter. The field has experienced several hype cycles, followed by disappointment and criticism, followed by funding cuts, followed by renewed interest years or decades later.

Object-Oriented Programming Languages. Object-oriented programming (OOP) languages are designed to overcome these problems. The basic unit of OOP is a class, which encapsulates both the static properties and dynamic operations within a "box", and specifies the public interface for using these boxes. Since classes are well-encapsulated, it is easier to reuse these classes.

As pointed out by Libresco 84 and Jennings, 85 Watson was merely faster with the buzzer—electronics beats human reaction time. For non-game-playing, real-world question answering scenarios, however, split-second reaction time may not constitute a competitive advantage. For harder questions, Watson's limitations became clearer.
