*Refiguring Life: Metaphors of
Twentieth-Century Biology by ...
The book looks at the discourse of
the contemporary life sciences, the
'metaphors' which allow scientific
work to proceed. |Keller, a
distinguished feminine historian,
argues that these metaphors, as
powerful as the physical technology
of modern science, define the paths
along which research can, and
does, move.*

Refiguring Life: Metaphors of Twentieth-Century Biology by ... Clarifying the puzzling confusions and the astounding productivity inherent in the adoption of the metaphor of information in modern genetics, Keller has written a beautifully argued and incisive book. Refiguring Life makes a solid contribution to the growing collective project of the cultural and historical studies of science and technology.
