Logistic regression - Wikipedia  
Categorical Variables, including both binary (with 2 values) and multcategory (with 3 or more values) clearly fail all three criteria. But there are a number of other types of regression models that do fit these variables. For binary variables,

# Online Library Regression Models For Categorical Dependent Variables Using Stata, Second Edition

probit and logistic regression models are the most common.

## Regression with Categorical Dependent Variables

Categorical variables with two levels may be directly entered as predictor or predicted variables in a multiple regression

model. Their use in multiple regression is a straightforward extension of their use in simple linear regression. When entered as predictor variables, interpretation of regression weights depends upon how the variable is coded.
