Reflection nd Exhibit: Carnival Mirrors (2 level) When light hits a shiny surface, like a mirror, we say it is reflected. Reflected light bounces back at the same angle that it hits the mirror. In the pictures below, connect the dotted lines to show how light from a mirror hits a mirror and how it bounces back.

REINFORCEMENT Reflection and Mirrors

being reflected by a mirror or refracted by a lens is the focal point. You will learn about lenses in the next lesson. Imagine that a concave mirror is part of a hollow sphere. The focal point is halfway between the mirror and the center of the sphere. The distance along the optical axis from the mirror to the focal point is the focal length.
