Timing chains can sometimes stretch and chuck up a cam sensor fault. Very common with Nissan engines. Usually caused from lack of oil, infrequent oil changes, lack of lubrication to the chain etc. If you've checked the wiring and changed the sensors, and you are still getting the cam fault code, then i'd say more than likely the chain.

There is an easy way to find out if your car is driven by a timing chain or timing belt motor. If, on the side (not top) of the engine, either left or right, there is a plastic cover, your car has timing belt. If there is no plastic on the side, you have a timing chain. Here is a video that explains and shows the point.
