Revit 2013 Guide Grid

Revit has a tool for this called the Guide Grid. It is a slightly odd little tool that allows you to line up model elements in the same location across multiple sheets. It does this by allowing you to move the viewport on a sheet by snapping to the datum elements in your model (levels, column grids and reference planes) and then snapping them to the intersections on the Guide Grid.

If you have multiple Guide Grids defined you cannot purge them, and they don't show up in the project browser. They simply exist in the sheet view(s). What is even odder is what this behavior implies. A guide grid is effectively an instance of a datum object similar to Grids, Levels or Reference Planes.
