Well Intervention - Halliburton
Issues encountered at the Intervention Stage. A common issue that effects the economic viability of a well during production is a high percentage water generation due to a watered out zone. This is particularly difficult to fix when the completion uses a sand screen and/or open hole gravel packs...

Well intervention using rigless techniques ¦ Offshore
Halliburton rigless well intervention services are cost-effective when compared to drilling rigs and workovers. With our coiled tubing, hydraulic workover, electric wireline and slickline capabilities, we can provide such services as electric logs, drilling, perforating tubing or casing, pumping and stimulation, sand control completions, well control, snubbing, recompletion, abandonment and well evaluation.

We combine industry expertise and an unmatched product portfolio to deliver industry-leading well intervention solutions and reliable well access. Our rigless intervention and stimulation offerings provide the same high levels of control and reliability as rig-based operations, with less mobilization time and cost.

Rigless Well Intervention Reduces Water Cut, Increases Oil ...
Rigless well interventions have shown to significantly improve production rates and completion efficiency, reduce mechanical risk and completion costs and extend the economic lives of mature field wells. Incremental savings can accrue each time a well is recompleted via wireline, coil tubing or using the PowerReach service.

Comparing Rigless Water-Cut Reduction Methods - OnePetro
TechnipFMC has established a strong reputation for innovation with its Riserless Light Well Intervention (RLWI) technology. This service helps the operators overcome the challenge of obtaining ...

Rigless well abandonment - InterMoor
Reducing the complexity and expense of subsea intervention operations is therefore critical to lowering operating expenditure and improving recovery over the long term. Rigless well intervention, in which smaller vessels and light well access technology are used to perform well operations, avoiding the need for a larger drillship or rig and associated riser pipework, is a key enabling technology.

Well Intervention Using Rigless Techniques - OnePetro

Rise of the Rigless - Wireline Magazine
The rigless techniques are further reviewed in relation to subsea well intervention. The emphasis is placed on selection of a floating vessel along with subsea systems to connect to the well. The paper includes a discussion on market trends that are directed towards either reducing intervention costs or minimizing its frequency.

Enhancing production
There are mainly three technologies for reducing water cut: mechanical shutoff in production well, chemical treatment of production well, and injection well profile control. This investigation focuses on low cost rigless methods, comparing their potential effectiveness and economics based on existing applications and computer simulation.

Rigless technologies are re-shaping the subsea well ...
Rigless techniques for well intervention are wireline, coiled tubing (CT) and hydraulic workover (HWO) services that do not require the use of a conventional workover rig and have the capability of performing downhole applications in live (under pressure) wells.

Reduce Intervention Time and Cost - Halliburton
In a “ lower for longer ” environment, operators are calling for more technological innovation to allow progress in the rigless intervention market by reducing complexity and increasing efficiency. At the heart of the matter is the practical issue of accessing subsea wells more easily and intelligently.

In well abandonment operations, our team ensures 100% equipment redundancy by carrying one complete spare SWAT system on deck during offshore operations. Benefits of the SWAT system Deployed from a cost-efficient light construction vessel, removing the requirement for a drilling unit or well intervention vessel.

Well Intervention ¦ Oceaneering
rigless operation. 1. n. [Well Completions] A well-intervention operation conducted with equipment and support facilities that precludes the requirement for a rig over the wellbore. Coiled tubing, slickline and snubbing activities are commonly conducted as rigless operations.

Enhance your well intervention strategy by integrating ...
Rigless intervention The Oceaneering Millennium ROV is connecting the flying leads from the well stimulation tool to the subsea tree. An alternative method, developed by Oceaneering International, uses a multiple-purpose service vessel (MSV) to safely and efficiently perform well stimulations without a drilling rig or riser.
