The research interests of the Cambridge Robotics Lab lie at the intersection of robotics and biology. Through abstraction of the design principles of biological systems, we develop core competences which are the rapid prototyping of dynamic mechatronics systems, bionic sensor and motor technologies, and computational control optimization techniques.

TUM Professoren - Bock_Thomas

Researchers led by the University of Cambridge have built a mother robot that can independently build its own children and test which one does best; and then use the results to inform the design of the next generation, so that preferential traits are passed down from one generation to the next.
