Experiment - Wikipedia

It is widely accepted that the Earth's interior is composed of several layers: the crust, the mantle, and the core. Since the crust is readily accessible, scientists have been able to perform hands-on experiments to determine its composition; studies on the more distant mantle and core have limited opportunities samples, so scientists also rely on analyses of seismic waves and gravity.

Nevada Geodetic Laboratory - Home

Recent technical innovations and developments in computer-based technology have enabled bioscience researchers to acquire comprehensive datasets and identify unique parameters within experimental datasets. However, field researchers may face the challenge that datasets exhibit associations among any measurement results (e.g., from analytical instruments, phenotype observations as well as ...

An experiment is a procedure carried out to support or refute a hypothesis, or determine the  
efficacy or likelihood of something previously untried. Experiments provide insight into cause-  
effect by demonstrating what outcome occurs when a particular factor is manipulated.  
Experiments vary greatly in goal and scale but always rely on repeatable procedure and logical  
analysis of the results.
