...

Air bags are supplemental protection and are designed to work best in combination with seat belts. Both frontal and side-impact air bags are generally designed to deploy in moderate to severe crashes and may deploy in even a minor crash. Air bags reduce the chance that your upper body or head will strike the vehicle's interior during a crash.

Airbag - Wikipedia

Air bag benefits are proven, but most of us have seen the safety warnings posted in vehicles and heard the news that they can kill. To date, air bag deployment has killed 147 people due to the force of the airbag itself, not wearing a seatbelt, and sitting too close to the airbag. Air bags are not soft pillows; they are balloons of air that inflate with a blast of energy. Workers that drive on the job should be aware of the ways to increase air bag effectiveness for themselves and their ...

during accidents, you do need to take a few precautions to ensure that you don't damage the system, or increase your risk of injury. Here's what you should know: Never ever place sharp items on the seat or near an air bag.

How Air Bags Work | YourMechanic Advice

The airbag has the space between the passenger and the steering wheel or dashboard and a fraction of a second to work with. Even that tiny amount of space and time is valuable, however, if the system can slow the passenger evenly rather than forcing an abrupt halt to his or her motion.

How Airbags Work | HowStuffWorks

On a vehicle with an air suspension system, inflated rubber bellows (also known as airbags) are supplied with air from the vehicle's air compressor via a storage system. These take the place of...

Safety And Air Bag System

The CABS system was developed by the United States Army Aviation Applied Technology Directorate, through a contract with Simula Safety Systems (now BAE Systems). It is the first conventional airbag system for occupant injury prevention (worldwide) designed and developed and placed in service for an aircraft, and the first specifically for helicopter applications.
