Please release Atlantic salmon to assist reintroduction ...

All Answers (15) But with the return of Atlantic salmon, the abundance of anadromous brown trout, which survived the long period of acidification, decreased (Hesthagen et al. 2017). As lime has a positive effect on trout abundance in the control rivers (with no salmon), the reduced trout density probably results from interspecific competition with salmon.

Selection of donour stocks to start with

All stocks of Atlantic Salmon once originating from German river systems are extinguished.

Reintroduction of salmon started by various - mostly private and often uncoordinated - initiatives from 1978 onwards using different stocks from Ireland, Sweden, France, Denmark, Spain and Scotland.
