## **Step-by-Step Programming with Base SAS Software**

SAS (Statistical analysis system) is one of the most popular software for data analysis. It is widely used for various purposes such as data management, data mining, report writing, statistical analysis, business modeling, applications development and data warehousing. Knowing SAS is an asset in many job markets.

## **Introduction to SAS Programming**

Simply put, a "view" is a SAS DATA step program that is stored for later execution. When the SAS language processor encounters the RUN statement, the program is compiled and saved, but not executed. When a procedure uses a data view, the program runs and serves data to the procedure as if the procedure were reading a regular SAS data set.
