In the simplest (non-existent) case, each dot on the mouse's pad corresponds to one pixel on the screen. So, for example, if your screen resolution was 1920x1200 and your mouse was capable of a maximum DPI of 600, you'd have to move your mouse two inches to get from the bottom of the screen to the top. If your mouse used a DPI of 1200, it would only take one inch to make the same movement on the screen. Therefore higher mouse DPI allows you to move faster on the screen with less mouse movement.
