Bedrock Edition beta scripting documentation – Minecraft Wiki
During my time on the Windows PowerShell team, I worked on a bunch of interesting, unsung parts of Windows PowerShell that can rock your scripting world. There are a few particular parts of Windows PowerShell with really funky names that, when combined together, can help you change the way you script. The nifty areas are: Splatting; Proxy Commands

Introduction to Scripting Languages - GeeksforGeeks
Variables in Batch Scripting. A variable is an entity that stores a specific value and allows the user to perform any set of instructions on it. To create variables we use the command "SET" command. A variable, unlike many programming languages, can be assigned simply without specifying any data type to it. SET my_variable=Hello World
