**Controlling DC Motors Using Python With a Raspberry Pi analogWrite() Method. Using the command analogWrite(pin, duty\_cycle[0-255]) will output a square waveform on one of the Arduino's PWM pins (3, 5, 6, 9, 10, or 11). This is dead simple but unfortunately is not very useful for controlling stepper motors. The problem is that this approach provides no control over the PWM frequency, which is fixed at**
