Addiction is a biopsychosocial disorder characterized by repeated use of drugs, or repetitive engagement in a behavior such as gambling, despite harm to self and others. According to the "brain disease model of addiction," while a number of psychosocial factors contribute to the development and maintenance of addiction, a biological process that is induced by repeated exposure to an addictive ...

Fingerprint Classification – look at fingerprints and develop a way to classify them. Taxonomy Project – students create their own kingdoms, phyla..etc and design organisms Alien Taxonomy – group and categorize alien species Analyze and Construct Cladograms – very simple cladograms showing how animals are organized by derived characters Zoobook – project that explores orders and ...

Evolution & Taxonomy

Gender is the range of characteristics pertaining to, and differentiating between, femininity and masculinity. Depending on the context, these characteristics may include biological sex, sex-based social structures (i.e., gender roles), or gender identity. Most cultures use a gender binary, having two genders (boys/men and

The current rate of species extinction is rapidly approaching unprecedented highs, and life on Earth presently faces a sixth mass extinction event driven by anthropogenic activity, climate change, and ecological collapse. The field of conservation genetics aims at preserving species by using their levels of genetic diversity, usually measured as neutral genome-wide diversity, as a barometer ...

1. Introduction. Well before the advent of modern human brain imaging, Hans Eysenck, the visionary psychologist and the most influential personality researcher in recent history, proposed a theory (Eysenck, 1967) that went beyond description and measurement of personality and, for the first time, provided the neurophysiological causes of personality.. It was unique in trying to explain ...

Examine the neurobiological foundations of behavior and how these inform all our psychological processes. This theme focuses on genetics, the old question of nature versus nurture, and the organization of the endocrine and nervous systems. Explore how the modern nervous system evolved across millennia to dictate our behaviors today.

AP® Psychology | Practice | Albert Psychologist Francis Galton, a cousin of the naturalist Charles Darwin, coined both the terms nature versus nurture and eugenics and believed that intelligence was the result of genetics. Galton believed that intelligent individuals should be encouraged to marry and have many children, while less intelligent individuals should be discouraged ...

No reinforcement. When you call your dog and he comes to you, it is important to reward him. No reinforcement leads your dog to not wanting to come to you. You can use a food treat or plenty of praise. Not understanding the dog ' s needs. Sometimes your dog will not come when called because you are rushing him.
