into those dealing with security and those that do not deal with security matters. The ?non-security? fields are common to all SNMPv3 implementations, while the use of the security fields can be tailored by each SNMPv3 security model, and processed by the module in an SNMP entity that deals with security. This solution provides considerable

SNMP Research--SNMPv3 with Security and Administration
SNMP version 1: the oldest flavor. Easy to set up - only requires a plaintext community. The biggest downsides are that it does not support 64 bit counters, only 32 bit counters, and that it has little security. A community string sent in plaintext, possibly from a restricted range of allowed IP addresses, is as good as the security gets.
