Sheet metal-operations 1. A piece of metal whose thickness is between 0.006(0.15 mm) and 0.25 inches(6.35 mm). Anything thinner is referred to as a foil and thicker is considered as a plate. Sheet thickness is generally measured in gauge. Greater the gauge number, thinner the sheet of metal.

Sheet Metal Forming - Karnataka
Sheet metal forming processes are those in which force is applied to a piece of sheet metal to modify its geometry rather than remove any material. The applied force stresses the metal beyond its yield strength, causing the material to plastically deform, but not to fail. By doing so, the sheet can be bent or stretched into a variety of complex shapes.
