Often, his arguments rest on the fact that because humans are evolutionarily optimized to eat meat, we should. This is a fallacy. Modern society routinely dispenses evolutionary goals (e.g. monogamy, having fewer children).

Sorry Vegans: Here's How Meat-Eating Made Us Human | Time

Eating cooked meat isn't well-tolerated in humans, either. The simple act of eating meat can cause you to die from choking. In fact, meat has been shown to be the leading cause of fatal asphyxiation for both adults and children in several populations. Assuming you don't choke to death, many popular evolution-based diets not only argue that human carnivory is based in evolution-which have seen is not entirely accurate-but is also the salve for most lifestyle-related diseases, which ...

Should We Eat Meat? | Wiley Online Books

Evolution turned us into omnivores. But there are reasons to be optimistic. For one thing, the world's appetite for meat may eventually level off. Consumption has plateaued and even declined a bit in many rich countries, including France, Germany, and the United States. I also believe that innovation will improve our ability to produce meat.
