Sidecar Pro - Product category - Brakes and suspension

Most sidecarists will experience the feeling of the rear suspension rising in a turn away from the sidecar, and will feel the rig bobbling, for lack of a better word, as the rear suspension lifts enough, and the sidecar nose moves some towards the ground. This is a signal to either back off your aggressiveness or to reduce speed.

The Fixible Side Car: A Different Angle on Sidecar Design ... At the insistence of a traveling salesman, Young founded the Fixible Side Car Company in 1913 with Carl Dudte. They purposely used the ...

Sidecar Design - Steve's workshop

As the title says, please post pictures of your sidecar chair suspensions. The sidecar design tread covers some options on this but a picture says more than a thousand words. ADV has quite a lot of info on hacks/sidecars and I believe a collected tread of suspensions is still missing. Not so much ...

sidecar frame

Have asked on another forum, but so far there does not seem to be a concise answer. Was wondering if there is a general rule when setting up the shocks on a sidecar rig. Not as much interesting in what one person does because that is for that particular person, weight, rig etc. Am trying to determine if there is a general starting point for the three shock location, softer on front but sidecar

Building Your Very Own Sidecar - Viking Bags

BMW had, and continues to have, driveshaft failures, from the high angles of stock GS models. On a sidecar installation, there is hardly any reason for a road-going machine to have such a high angle. The angle can be reduced by several means, one of which is just reduce the suspension spring strength or use a shorter shock unit, etc.

Sidecar Suspension Design

The chosen suspension design was to have a horizontal shock absorber driven via a bell crank from the wheel. The pivot for the swinging arm would use roller bearings. The arm was designed to fit the chosen wheel and axle assembly and to make sure the tyre was clear of the frame.

SRK Engineering | Sidecar Leading Link | Leading, Chrome ...

For the sidecar hobbyist, the frame offered is from DMC's Kenna Sidecar. It is a complete rolling chassis with a "Hagon" shock absorber with our swing arm assembly for suspension. We can make this frame with or without a trailer hitch hook-up extension. Build your own sidecar without the hassle of engineering and building your own frame.

Sidecar Mounting | DMC Sidecars

The advantages of Leading Link, you can adjust the trail to lighten the effort required to steer the outfit, Floating calipers can be fitted which means braking load is transferred to the main fork tubes, so under heavy braking you still have normal suspension travel, and only minor dive due to weight transfer and Coil over shocks give ...

Mike Currin Sway Bar - High Perfomance Sidecars

The sidecar is mounted on a stiff sub-frame, which replaces the existing stock tele-lever suspension system A fabricated steel rear swing arm replaces the stock aluminum para-lever swing arm assembly, with a 165/70R14 tire mounted on an EML manufactured 14" wheel assembly The R1100 / 1150 GS kit is available in variations.

The good, the bad, ...an overview of sidecaring, sidecars ...

If you do a g**gle image search of the term "suspension Gregoire", you will find some very strange motorcycle and car suspension designs... he did a sidecar one too, but I cannot find a picture of it. I saw one once years ago, and it was inexplicable, like many Gregoire designs.

Show us your sidecar suspensions! | Page 2 | Adventure Rider

The manufacturer has been recognized as the industry leader in precision engineered sidecars. Innovations like, comfort designed suspension systems, custom mounting hardware requires NO welding to motorcycle and special safety features are engineered into the design to make the manufacturer the leader that all others try to imitate.

Modifications - EML Trikes & Sidecars

The result of improper sidecar mounting and the proper fix. ... here was the fact that the Harley sidecar was of a three point design with the upper front arm intended to flex slightly to help absorb some of the input from the sidecar wheel that like all Harley sidecars up to the end of production, had no suspension at the wheel.

Sidecar | multibody.net

Sidecar Suspension A sidecar rig is a different because you have a normal motorcycle suspension but then you have a third wheel and quite a bit of extra weight off to one side. The off balance situation causes your motorcycle to act odd.

US5033762A - Suspension system for a sidecar motorcycle ...

Attaching the sway bar end to the sidecar suspension was fairly easy. The sidecar swing arm is made out of 2 inch square tubing. A ¾ inch holes was drilled through the swing arm and a piece of 5/8 inch inside diameter, ¾ inch outside diameter steel tubing was driven through the hole and tack welded into place.

Suspension by Design - Ozbike Article - Bertrand Cadart

The force on the suspension of the sidecar has an average value approximately as equal as the force on the fork of the motorcycle but appears to have higher load variations during the path. In the left curve the sidecar's suspension is discharged almost completely, while those of the motorcycle, and in particular the rear, are loaded.

The Fixible Side Car: A Different Angle on Sidecar Design

Suspension by Design - Ozbike Article It's a common problem with sidecars - the traditional shock absorber on the sidecar wheel can't handle the extremes - it's either too harsh or too soft - when cornering hard.
