Introduction to Signals and Systems develops continuous-time and discrete-time concepts/ methods in separate chapters - highlighting the similarities and differences - and features introductory treatments of the applications of these basic methods in such areas as filtering, communication, sampling, discrete-time processing of continuous-time signals, and feedback.

Signals and Systems | Module 1 | Introduction to Signals and Systems (Lecture 1)

Haykin and Van Veen have designed Signals and Systems to be appropriate for both one- and two-semester sophomore-junior versions of the Signals and Systems course. The books integrated, balanced treatment of continuous- and discrete-time forms of signals and systems is both a reflection of the topics real roles in engineering practice and a clear, practical way of introducing the large range ...
