Isight - simulia.com

Isight and the SIMULIA Execution Engine (formerly Fiper) are used to combine multiple cross-disciplinary models and applications together in a simulation process flow, automate their execution across distributed compute resources, explore the resulting design space, and identify the optimal design parameters subject to required constraints.

iSight focuses automatically and an image from iSight appears onscreen. This lets you know iSight is working properly. When iSight is in use and capturing video, a green light appears on top of the unit. If you don't see an image: n Be sure iSight is plugged in firmly and the lens is open (see page 18).
