VTX Controls such as Smart Audio and Tramp protocol are no longer working out of the box since Betaflight 4.1. You now have to configure VTX tables first for your particular video transmitter depending on the protocol it uses.. If you don't setup VTX Table, you won't be able

to change channel, band or power.

Step 1: Create an empty file. You can use Notepad on Windows or TextEdit to do so by creating a new file. Just name the file ssh. Save that empty file and dump it into boot partition (microSD). Step 2: Create another file name wpa_supplicant.conf . This time you need to write a few lines of text for this file.
