Module Reviews - Open University

The set of numbers for which a function is defined is called its domain. The set of all possible numbers $f(x)$ as x runs over the domain is called the range of the function. The rule must be unambiguous: the same x must always lead to the same $f(x)$. For instance, one can define a function f by putting $f(x) = p/x$ for all $x \neq 0$.

Access even-numbered exercise solutions. Ability to whitelist other teachers so they can immediately get full access to teacher resources on openintro.org.

Active Calculus Landing Page

It is best to begin each section by attempting the worked example as an exercise. If you find this difficult, then study the solution to the worked example and attempt the following structured exercise. Otherwise, move on to the further exercises. The booklet is best worked through before the beginning of the course.
