Factor all denominators and determine the LCD. The LCD is $(x + 2)(x + 3)$. Step 2: Identify the restrictions. In this case, they are $x \neq -2$ and $x \neq -3$. Step 3: Multiply both sides of the equation by the LCD. Distribute carefully and then simplify. Step 4: ...

note the domain, which is all real numbers except $x = 2$ and $x = 3$. That is, these are the values of x that will cause the equation to be undefined. Since the least common denominator of $x - 2$, $x - 3$, and $(x - 2)(x - 3)$ is $(x - 2)(x - 3)$, we can multiply each term by the LCD to cancel out the denominators and reduce the equation to $x^2 - 5x + 6 = 0$.
