Sound Travel in the SOFAR Channel. In the deep ocean at mid-latitudes, the slowest sound speed occurs at a depth of about 800 to 1000 meters. This is called the sound speed minimum. The sound speed minimum creates a sound channel in which sound waves can travel long distances. Sound is focused in the sound channel because the sound waves are continually bent, or refracted, towards the region of ...

Yet to introduce the concepts and flavor of the technique, some structure can be useful. We offer one approach here: six steps. Although these steps may provide a window into Focusing, it is important to remember that they are not the six steps. Focusing has no rigid, fixed agenda for the inner world; many Focusing sessions bear little resemblance to the technical process that we define here.
