*Spatial cognition - Wikipedia  
Spatial reasoning is a category of  
reasoning skills that refers to the  
capacity to think about objects in three  
dimensions and to draw conclusions  
about those objects from limited  
information. Someone with good  
spatial abilities might also be good at  
thinking about how an object will look  
when rotated.*

*Spatial Reasoning :: Space*  
*Abstract. Spatial cognition is important in human learning, both in itself and as a major substrate of learning in other domains. Although some aspects of spatial cognition may be innate, it is clear that many important spatial concepts must be learned from experience.*
