Short Cut. For compounds containing only C, H, O, N, S, and halogens, the following steps permit a quick and simple calculation of the number of double bond equivalents: 1. O and divalent S are deleted from the molecular formula 2. Halogens are replaced by hydrogen 3. Trivalent N is replaced by CH 4.

Spectrometric Identification of Organic Compounds. First published in 1962, this was the first book on the identification of organic compounds using spectroscopy. Now considered a classic, it can be found on the shelf of every Organic Chemist. The key strength of this text is the extensive set of real-data problems in Chapters 8 and 9. Even professional chemists use these spectra as reference data.
