In order for our model to be in third normal form, we need to remove the transitive dependencies. As we stated our dependency is: CustomerCity relies on CustomerPostalCode which relies on CustomerID. It is OK that CustomerPostalCode relies on CustomerID; however, we break 3NF by including CustomerCity in the table.

SQL in easy steps, 3rd Edition errata | Aspirations ...

SQL is About Table References. If a has 3 records and b has 5 records, then the above combined table reference will produce 15 records (3 x 5). This "output" is "fed" / "piped" into the GROUP BY clause (after filtering in the WHERE clause), where it is transformed into a new "output". We'll deal with that later on.

In Easy Steps Downloads - In Easy Steps

Introduction to Three Simple Steps to Writing SQL. The first step is to pose the question . This will be in the form of a phrase. In the second step we'll work toward taking our question and transforming it into a SQL statement . To do this we'll start to map key aspects of our question into database language,...

[PDF Download] SQL In Easy Steps 3rd Edition [PDF] Full ...

I was reading through SQL in easy steps, 3rd Edition and made it to page 152 where it covered Sub-query calculated fields. It's a fancy way of saying a SELECT statement within a SELECT statement , but isn't that hard to grasp if you're familiar with how variable interpolation works with Bash or similar shells.
