Actively solving practice problems is essential for learning probability. Strategic practice problems are organized by concept, to test and reinforce understanding of that concept. Homework problems usually do not say which concepts are involved, and often require combining several concepts. Each of the

## Statics Problems

For all solutions, let  $T_1$  be the cable on the left and  $T_2$  be the cable on the right. The sign always has weight ( $W$ ), which points down. The sign isn't going anywhere (it's not accelerating), therefore the three forces are in equilibrium. Describe this state using the language of physics — equations; in particular, component analysis equations.
